SUMMARY

Software Development Engineer who builds and audits agentic AI systems in Python on Linux, Docker and CI/CD. Built **Lace**, an autonomous auditor that reviewed **500+** production LLM-agent runs through adversarial review, and **Docate**, an 8-stage agentic pipeline gated by an adversarial critic and per-agent sandboxing. Solved **500+** DSA problems. Takes ambiguous problems from scratch to shipped with end-to-end ownership.

TECHNICAL SKILLS

Languages: Python, SQL, Bash; Exposure: TypeScript, JavaScript, Java, C++
Environment & DevOps: Linux, bash / CLI workflows, Docker, containerized microservices, Git / GitHub CLI, GitHub Actions CI/CD, AWS (EC2, ECS, ECR, S3, DynamoDB, CloudFormation, CloudWatch, EventBridge, Route 53, Bedrock)
AI / Agents: agentic & multi-agent systems, LLM evaluation & observability, adversarial review / refutation gates, agent sandboxing, Claude Code, LangChain, LangSmith, Model Context Protocol (MCP), RAG (retrieval-augmented generation), prompt engineering
Backend: REST APIs, SSE streaming, FastAPI, Next.js, React, Node.js, event-driven architecture, concurrency (threads / asyncio), idempotency, retries / backoff, pandas, NumPy, OpenCV
Databases: MySQL, PostgreSQL, DynamoDB (NoSQL modeling, repository pattern)
CS Fundamentals & Practices: data structures & algorithms, object-oriented design (OOP), system design, algorithm analysis; AI-first development, Agile / Scrum, end-to-end ownership, technical communication

EXPERIENCE

Voxiis — AI Engineer **Aug 2026 – Present**

- Building a product localization pipeline from scratch, plus agentic systems and automation for internal marketing, sales lead generation and product-manager assistance in an AI-native team.

Trilogy Innovations — Software Development Engineer Intern **Jan 2026 – Jul 2026**

- Built **2** production agentic systems (Lace, Docate) and contributed to a third (Braintrust) in **6** months, taking ambiguous problems to production in weekly agile cycles with end-to-end ownership, in Python and TypeScript on AWS and Docker.

PROJECTS

Lace — Autonomous LLM Agent Auditor (Trilogy Innovations)
Tools: Python, LangSmith, AWS CloudWatch, Claude, multi-agent orchestration

- Built an 8-layer pipeline that audited **500+** production runs across **30+** AI agents with a 5-perspective LLM panel and adversarial refutation gate, producing **500+** evidence-backed reports (**90%** confirmed findings) with zero remediation writes.
- Reconciled LangSmith status against raw CloudWatch logs to correct **30+** mislabeled run outcomes and abstained on **24** runs with insufficient evidence (fail loud over false certainty); a self-learning loop promoted **16** lessons into agent memory.

Docate — Autonomous AI Documentation Pipeline (Trilogy Innovations)
Tools: Claude Code, Python, Playwright, GitHub CLI, Mintlify MDX

- Architected an 8-stage agentic pipeline auto-generating documentation PRs from commits at **80%** autonomous resolution across **30+** production runs, with zero human input until final approval.
- Gated every PR with a 4-check parallel review and an 8-principle adversarial critic requiring a unanimous pass; hook-based per-agent filesystem sandboxing gave **zero** unauthorized commits to main.

Braintrust — Distributed AI-Expert Marketplace Platform (Contributor, Trilogy Innovations)
Tools: TypeScript, Next.js 15, LangChain, LangSmith, MCP, AWS (ECS, ECR, CloudFormation, DynamoDB, EventBridge Scheduler), Docker, REST, SSE

- Shifted agent backend execution into a LangSmith sandbox for **2–3×** faster agent responses (platform-wide **3×** latency reduction), plus agent-first dev servers so agents run and test safely without touching production.
- Built the unified invocation core (REST / SSE, Google Chat, MCP) and MCP multiplexing over SSE with pooled, TTL-cached connections; shipped an in-chat cron system on AWS EventBridge Scheduler.

EDUCATION

Sri Shakthi Institute of Engineering & Technology, Coimbatore **Aug 2022 – May 2026**
B.Tech, Artificial Intelligence & Data Science | CGPA: 8.19
Relevant coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Object-Oriented Programming, Database Management Systems, AI agents.

ACHIEVEMENTS

- Solved **500+** DSA problems across LeetCode, Codeforces and HackerRank; published **mlgos**, an open-source ML package, on PyPI.
- Mentored **100+** students in DSA, operating systems and computer networks via daily problem-solving and code reviews (2025).
